

Preface

This guide has been developed to assist in identifying suitable alternative EasyTrim Reveals® profiles when a specific profile is unavailable or when evaluating comparable design options.

Before considering an alternative profile, first determine whether the requested profile is available in a different finish (for example, substituting Primed with Clear Anodized or another available finish). (Figure 1.1)

In some cases, profiles from the 7/16" and 5/16" systems may also be interchangeable, depending on the actual thickness of the cladding material being installed. (Figure 1.2)

If the requested profile is unavailable in all suitable finishes or compatible system sizes, this guide can be used to identify the closest alternative based on function, appearance, and application.

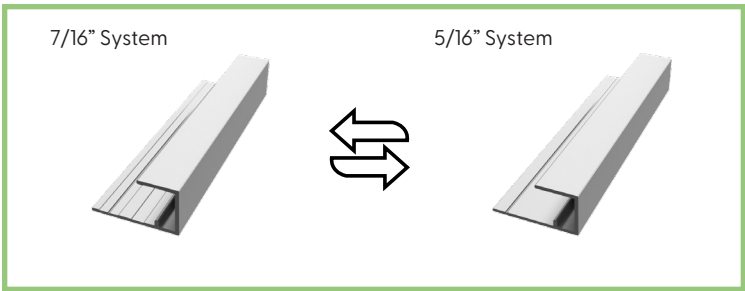

Figure 1.2

How to Read This Guide

Each row begins with the EasyTrim Reveals® profile that is unavailable or being evaluated for substitution. The exchange symbol (↔) indicates that the profiles listed to the right are recommended alternatives.

Alternative profiles are arranged from left to right, with the closest functional and aesthetic match listed first, followed by additional options in descending order of similarity. The closest match is often a two-piece or multi-angle variant of the original profile.

When selecting a substitute, always choose the leftmost compatible option before considering those farther to the right. (Figure 1.3)
