Easy Trim[®]
Elegance

Quiet design. Powerful performance.

Moving your order to EasyTrim Elegance®

The next generation of EasyTrim Reveals® is in stock. This guide explains what we are proposing, why, and exactly how your profiles convert, so you can decide with the full picture.

Your order just got an upgrade

EasyTrim Elegance is here. It is the next generation of the trim system you specified, it is in stock, and we would like to put it on your project.

For more than fifteen years EasyTrim Reveals® has set the standard for aluminum trim on fiber cement. Elegance is what happens when you take that system, redraw every 5/16" profile from the extrusion up, and build in what installers and designers have been asking for: cleaner reveal lines, more effective drainage, and a range that works together as one system.

Same 6063-T6 aluminum.

Same 15-year Limited Warranty.

Better product.

EasyTrim Elegance® ▶

What you would be getting

The same system, elevated from the extrusion up.

EasyTrim Elegance is a two-piece extruded aluminum trim system for fiber cement panels, lap siding, and the transitions between them. It installs the same way as EasyTrim Reveals®: a backplate is fastened to the wall, the siding goes in, and a decorative top cap snaps on to cover the edges and cuts.

What has changed is the shape of the profiles themselves.

Refined geometry

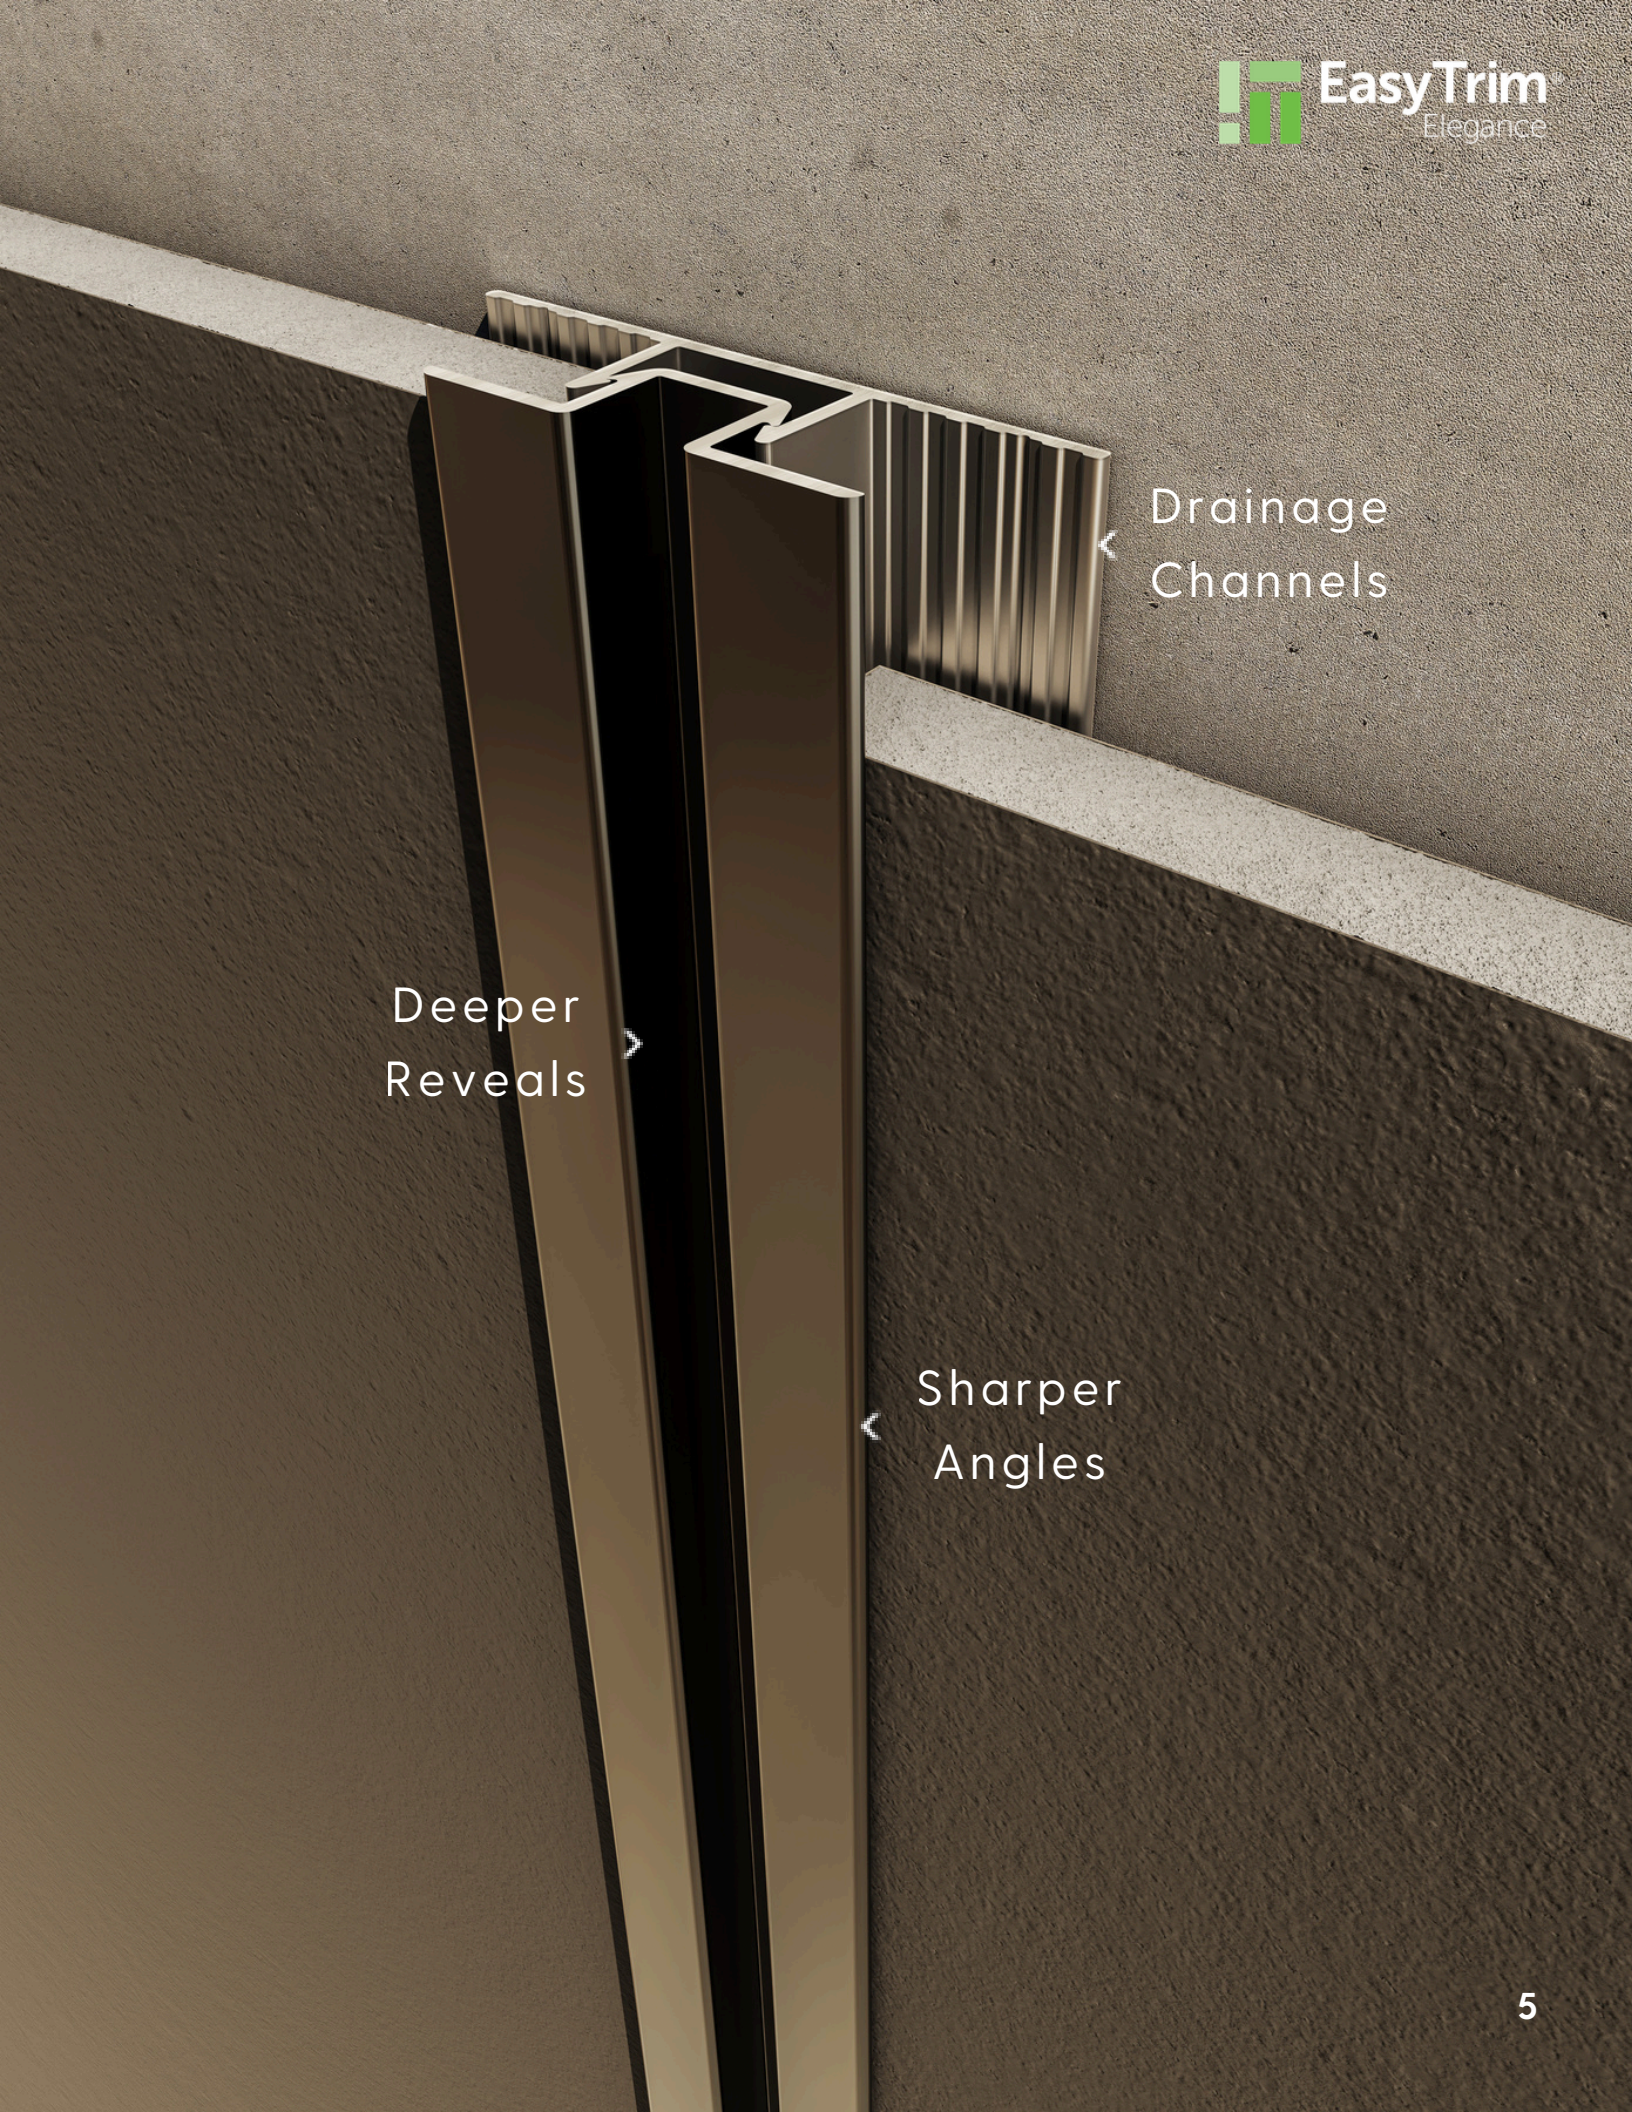

Every 5/16" panel and transition profile has been redrawn. The reveal lines are deeper, with sharper angles for a cleaner look.

Integrated drainage

Instead of the EZ-Bump, water management is built into the profile geometry more effectively with drainage channels moving moisture away from panel edges and out of the wall assembly.

Faster lead times

EasyTrim Elegance is in stock across the full profile range and ships on our standard schedule. Moving your order to Elegance gets product to site sooner than waiting on the original profiles, with no change to the finish you chose.

What stays the same

Everything you chose EasyTrim Reveals® for is still there.

The material is the same 6063-T6 extruded aluminum, in the same 10 ft field-cutable lengths. It will not rust, rot, swell, or crack, and it carries the same 15-year Limited Warranty on the extruded profiles.

The construction is the same two-piece system: a backplate fastened to the wall, siding installed with nothing in the way, and a snap-on top cap that covers the edges and cuts.

Fit and Finish™ edge protection is unchanged, so joints stay uniform and the system still accommodates building movement. Your installer will recognize every step.

A photograph of a modern building facade. The upper portion features large, vertical glass windows reflecting a warm, orange-hued sky. Below the windows is a light-colored, possibly metallic or stone, panel with thin vertical lines. The lower portion of the image is a dark, semi-transparent overlay containing text.

Ready when you are

Elegance is stocked and ready,
so the decision that improves the product
is the same decision that shortens the wait.
